

## Of the elementary moment.

This is an important moment for our comprehending of space time; so it will be worth our while to dig into it a little more at this stage. What exactly are we saying?

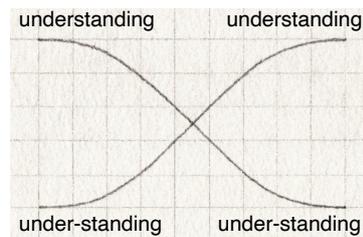

We are saying that for the singularity of understanding to comprehend space-time realities, then those realities must perform be comprehending of the singularity of understanding.

The simplest alter-verse for which space-time is possible is a bi-verse. Having said that, this is not the kind of reality that we would recognise, for it would consist of an endless monotony for both constituents of simply 'being different from the other'. Nevertheless, by considering a twofold alter-verse we should be able to further define the terms that might apply in the first few moments of any real condition of the state of singular understanding.

**Understanding under-stands; that is the entire singularity. Understanding is a dynamic, there are no materials or substance being compressed under infinite gravity to become a singularity. Singularity is simply understanding.**

Under-standing is the character of [the singularity of] understanding that allows things like tree bee pollen Violet

breeze to exist spatio-temporally. Here is our symbol for the symmetry of understanding - the symmetry demanded by singularity...

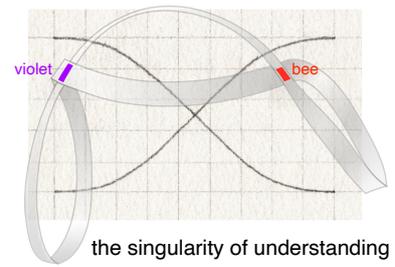

elementary moment of under-standing

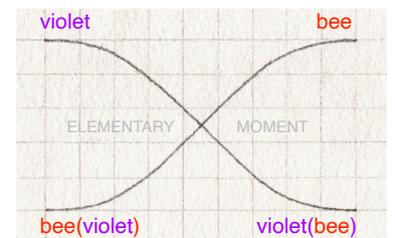

The symbol is comprised of two lines which cross each other. Let us say that these two lines are the only paths of under-standing that would let each be situated under the other on a two dimensional surface. Each is both above and under the other path. So we have drawn a symbol of mutual understanding for which each stands symmetrically under the other. It is the **elementary moment** of a [twofold] alter-verse, and which [as with all n-fold alter-verses] must (for the sake of singularity) contain all future moments of spacetime. The question is how? and that is what we will explore next.

**We will in effect be exploring how in the elementary moment, what seems to be the condition of space can appear to flow for a few moments as the condition of time.**

Elementary moment of violet-bee bi-verse

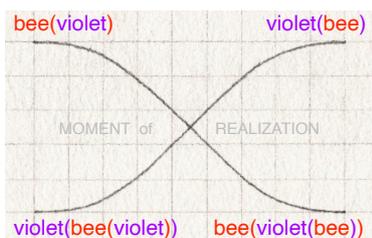

**violet** is self-aware as its ownmost difference from itself. **bee** is self-aware as its ownmost difference from itself. But inasmuch as this is the singularity of understanding, **violet** is not only aware as its ownmost difference from itself, but also as its difference from **bee**. **violet** is aware as **violet** [its ownmost difference] and as **bee** [a difference different to its ownmost difference.] **violet thus grasps together the two as its ownmost constitution, and as that constitution, comprehends difference ~ myself from other. Likewise does bee.**

In the above diagram **bee** understands **violet** and **violet** understands **bee**; but no time actually passes 'during which' their under-standing takes place. Which means that

**the bee which violet is real as, is [always] already real as violet, the violet which bee is real as, is [always] already real as bee.**

For their bi-verse, this is how the *singularity factor* [p42] applies; and it means that **bee(violet)** is now, in this moment real as **bee(violet(bee))** and that **violet(bee)** is now, in this moment real as **violet(bee(violet))**:

In the **ELEMENTARY MOMENT** there is nothing like a spacing or a duration - each is simply, actually, real as being

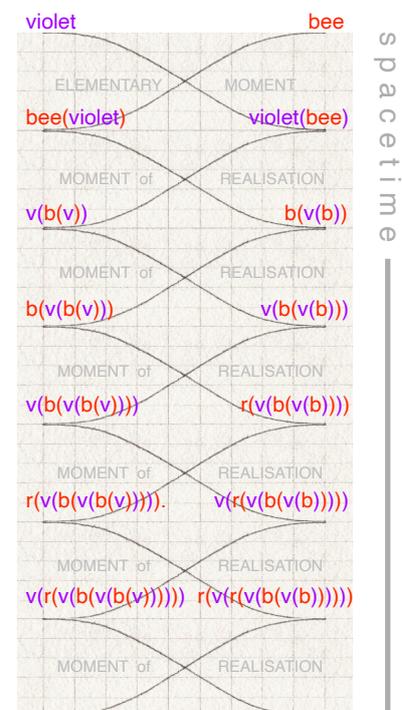

different with the other. But at the **MOMENT OF REALIZATION** we can see that a fundamental change has taken place inasmuch as each is now a constituent of its own understanding, **violet** is a constituent of **violet(bee(violet))** and **bee** is a constituent of **bee(violet(bee))**. What this means for them is that each is real and comprehends as that which the other already is - which is itself.

**Bee is different from that which it was, not because time has passed, but because it is instantly spaced from itself by the violet which it is.**

**Violet is different from that which it was, not because time has passed, but because it is instantly spaced from itself by the bee which it is.**

**But neither will ever be aware as anything but different from the other for an eternity of their spacetime.**

We can now construct the constituents of the first [seven] moments of **violet-bee** spacetime. Abbreviations will be necessary:

spacetime
