

Of temporality and time

If understanding is the mode of singularity ~ the way that it is-as ~ then alterity [otherness] must be what it is ~

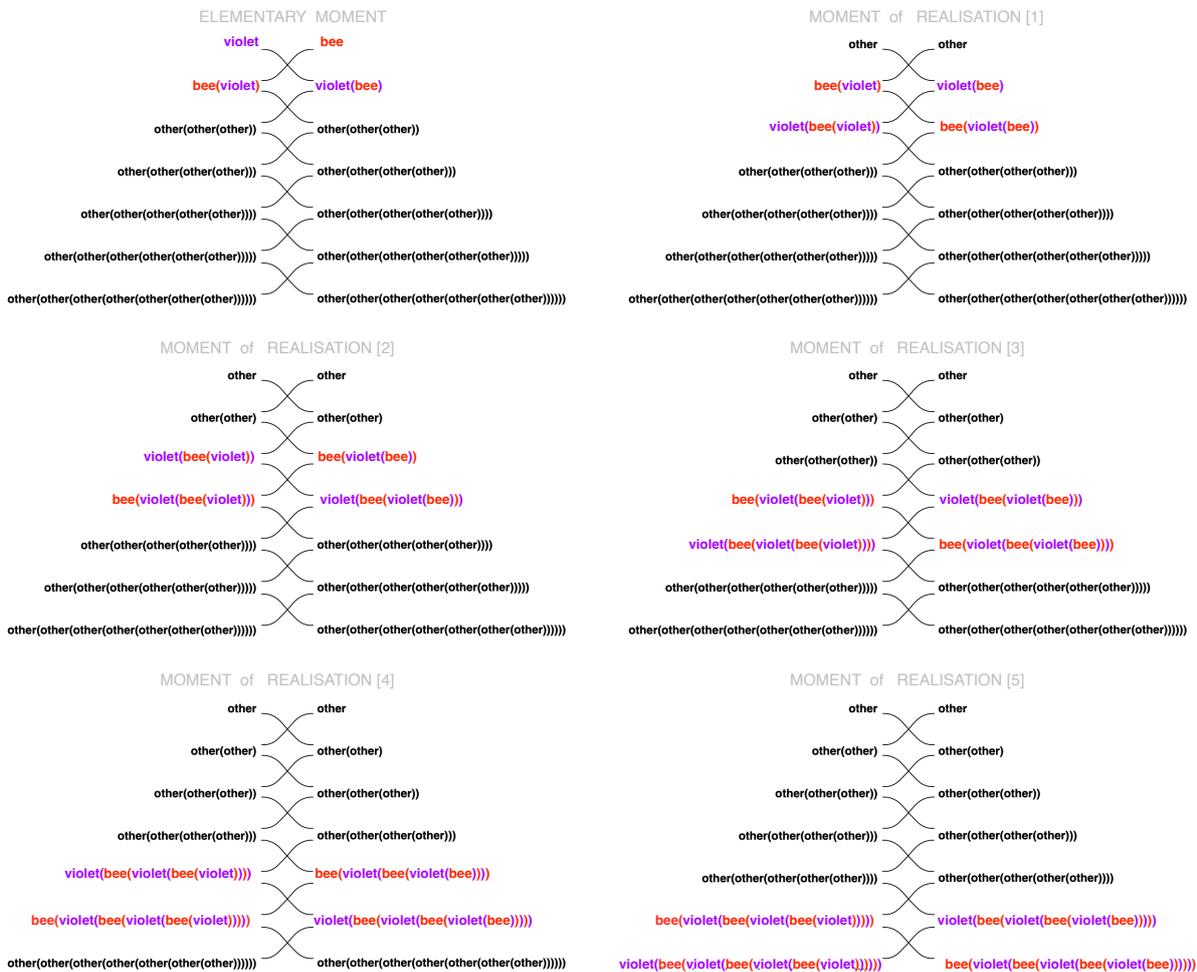

THE SINGULARITY OF OTHERNESS

~ is a two dimensional temporality, of which each constituent other understands and be-comes real as that which the others already are ~ which is three dimensional Myself

The adjacent image shows the temporality of otherness for a bi-verse.

The image sequence below shows the first five moments of three dimensional realisation for Myselfs violet-bee, flowing through the two dimensional, bi-versal, temporality of otherness.

Mythogram eight ~ of gravity and com-prehending

The image below is an overlay of various zooms of the Mandelbrot set. Perhaps this might be a way to visualise the singular temporality of otherness - or rather, the sum of all possible iterations of all possible under-standings of *the* elementary moment. It is in effect an attempt to describe every possible difference in every possible three dimensional spacetime reality ~ flowing through and through and through the **two dimensional** temporality of otherness. It is the deepness Violet tries to describe in stone.
